**IN THE CLAIMS**

**Amendments To The Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) An energy device comprising a winding body in which a band-shaped laminate having a flexible elongated substrate, a negative collector, a solid electrolyte, a positive active material, and a positive collector in this order is wound in a plate shape with the flexible elongated substrate placed inside,  
wherein a cross-sectional shape of the winding body perpendicular to a winding axis includes portions at opposing ends of the cross-sectional shape with small radiuses of curvature and portions between the opposing ends of the cross-sectional shape with large radiuses of curvature.
2. (Original) The energy device according to claim 1, wherein the flexible elongated substrate is made of an insulating material.
3. (Original) The energy device according to claim 1, further comprising a negative active material between the negative collector and the solid electrolyte.
4. (Original) The energy device according to claim 3, wherein a thickness of the negative active material is smaller than that of the positive active material.
5. (Original) The energy device according to claim 1, wherein a minimum radius of an outer surface of the flexible elongated substrate is in a range of 5 times to 100 times a thickness of the band-shaped laminate excluding the flexible elongated substrate.
- 6-29. (Canceled)

30. (Currently Amended) The energy device according to claim 1, wherein the ratio of the size in the a horizontal direction to the size in the a vertical direction for the plate shape is at least 5.
